KUALA LUMPUR

International Plasma and Fractionation Association

- Not-for-profit plasma fractionators
- National blood services
- Committed to provide a secure and safe supply of plasma and plasma products
- To meet patient's needs for Plasma Derived Medicinal Products

IPFA

IPFA Priorities

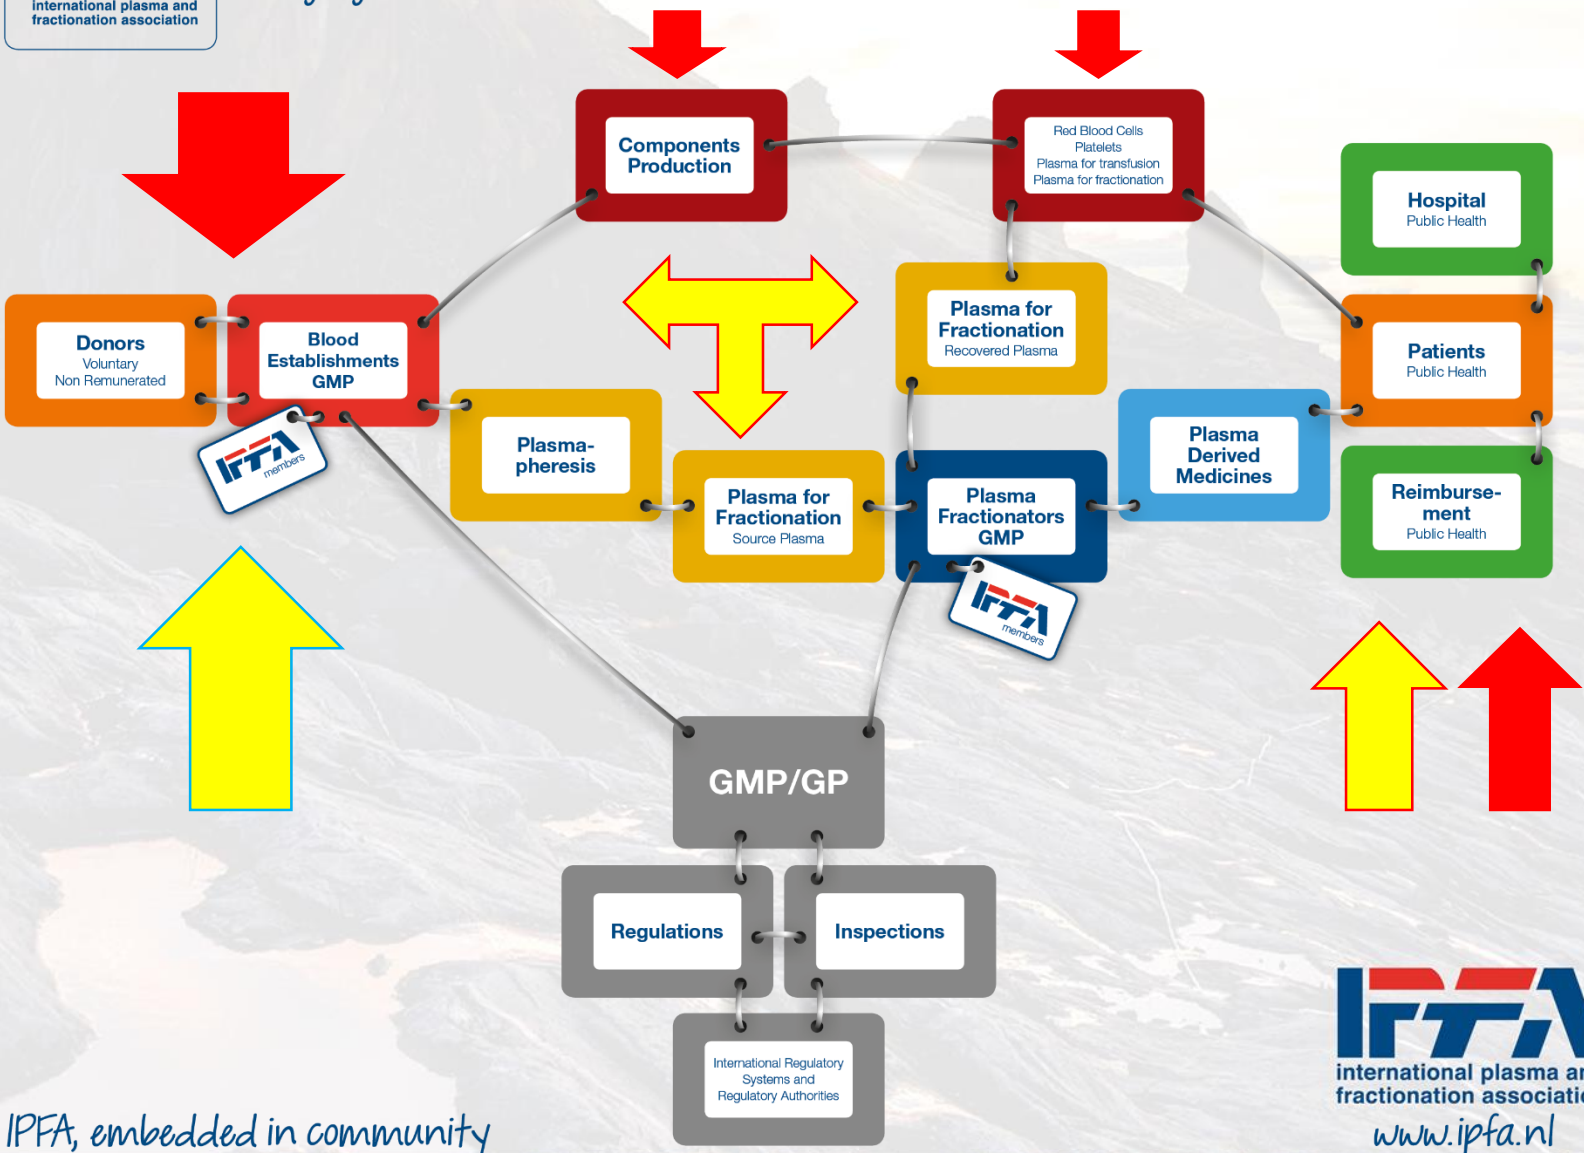

KUALA LUMPUR

- Increasing plasma supply from VNRBD – globally
- Contributing to international regulations
- Lobbying and educating stakeholders
- Collecting data on plasma supply and plasma products use
- Supporting contract fractionation for developing countries
- Building co-operative relationships with patients' organizations
- Provision of scientific and technical expertise
- Promotion of science-based decision making

Plasma for Fractionation - World
2005 - 2013 (Thousand Liters)

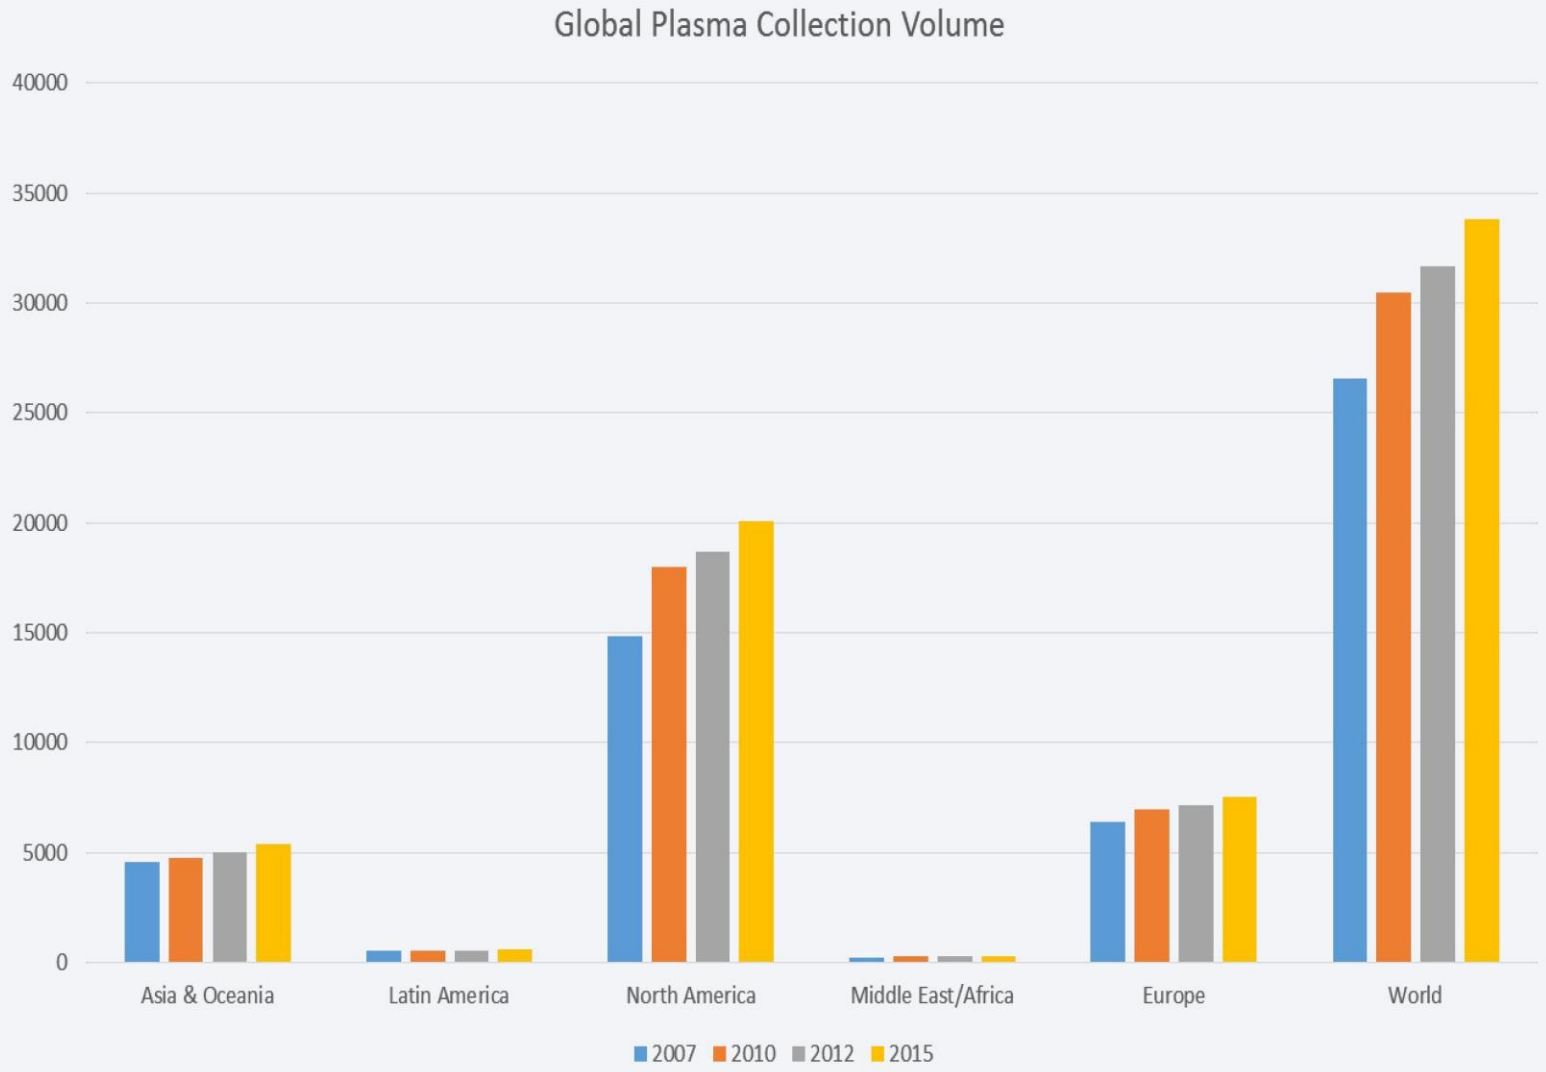

The volume of source (apheresis) plasma has more than doubled since 2005, while the supply of recovered plasma has remained essentially stable.
Several million liters of recovered plasma remains unused

Plasma for Fractionation by Region 2005 to 2013
(1000 x liters, recovered & apheresis)

Source (apheresis) plasma collections grow the fastest, particularly in the United States

Plasma is a strategic resource

Paul F.W. Strengers[1,2] and Harvey G. Klein[3]

Abstract

commercial plasma industry. However, geographic imbalance in the collection of plasma raises concerns that local disruptions of plasma supplies could result in regional and global shortages of essential PDMPs. Plasma, which fits the definition of a strategic resource, that is, "an economically important raw material which is subject to a higher risk of supply interruption," should be considered a strategic resource comparable to energy and drinking water. Plasma collections should be increased outside the United States, including in low- and middle-income countries. The need for capacity building in these countries is an essential part to strengthen quality plasma collection. This will require changes in national and regional policies. We advocate the need for the restoration of an equitable balance of the international plasma supply to reduce the risk of supply shortages worldwide. Strategic independence of plasma should be endorsed on a global level.

IPFA 3rd Asia Group Photo

KUALA LUMPUR

Today, at the beginning of the morning coffee break,

we would like to take a group photo.

You are all requested to remain in the meeting room

once session one has finished.

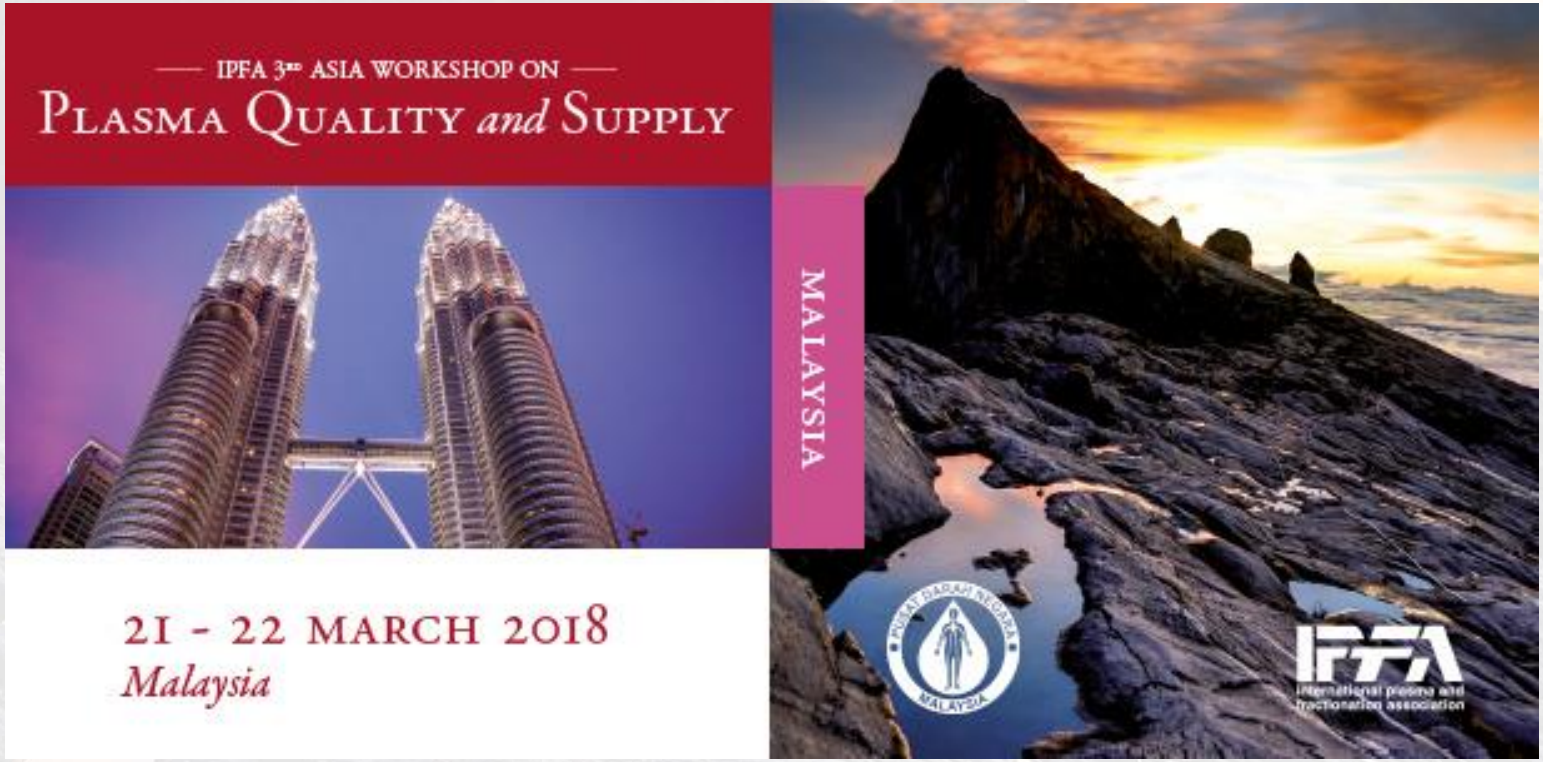

After the group photo, we invite you to enjoy the coffee break

in the pre-function area of Manhattan.
